

## Introducing the Vapourtec easy-Photochem System 'Bringing Photochemistry to the Bench'

The Vapourtec easy-Photochem is a comprehensive, yet easy-to-use system that aims to bring photochemistry to **every** synthetic chemistry lab.

Photochemistry is a powerful under-utilised synthetic technique. Recently there has been resurgence in interest in photochemistry due to its ability to provide novel structures and alternative, greener synthetic routes. In developing the easy-Photochem, Vapourtec's aim is to bring photochemistry out of the hands of dedicated expert users and make the technique easily and safely available for synthetic chemists.

### Key Features of the easy-Photochem

- Continuous flow photochemistry
- Safe and fully enclosed lamps
- Space saving compact design
- Integrated UV reactor and pumps
- Two independent pump channels
- Fully chemical compatible pumps
- Second reactor position
- Intuitive touch panel interface
- Either UV lamp or LED sources
- User selectable UV power
- Light source wavelength filtering
- Temperature control -5°C to 80°C
- Easy to use and affordable

### Continuous Flow Photochemistry

Traditional batch photochemistry techniques have proven limitations, flow photochemistry provides improved control and safety profiles

- Reaction products leave the reactor after exposure to the UV light source
- Reactive intermediates generated by UV exposure can be immediately fed into a second reaction step
- UV exposure times are precisely controlled and consistent
- UV penetration depth is not an issue as the thickness of the fluid being irradiated is 1.5mm
- The photochemical reaction can be scaled simply by running the process for longer
- The maximum volume of the reactor is only 10ml, the hazard of maintaining a large volume of solvent in close proximity to a high temperature lamp is significantly reduced

## Safe and fully enclosed lamps

The light source within the easy-Photochem is totally enclosed, allowing for safe operation in a standard laboratory fume cupboard.

The power supply is interlocked to ensure power is safely disconnected under any conditions out of the designed parameters.

## Compact Design

The compact size means that the easy-Photochem occupies the minimum of fume cupboard space. The system can be easily moved from one location to another.

## Wavelength Filtering

A range of band-pass filters are available to ensure your reactants are only exposed to the desired wavelengths. Filters are quickly and easily changed.

## Temperature Control

The reactor temperature can be set between -5°C and 80°C with a 1°C resolution. Cooling is provided by the Vapourtec cooling module.

## Selectable, Intense UV Lamp

At the heart of the easy-Photochem is a compact, high intensity medium pressure metal halide lamp or high power LED source. The shrouded lamp, made especially for Vapourtec is designed for dimmable operation without compromise.

- Controlled lamp power from 75W – 150W
- Lamp power is continuously monitored and logged
- High power LED sources having precise output, available in 365nm, 395nm, 405nm, 420nm, 450nm, 480nm and 500nm
